RoundSling

Flat slings and round slings

DESCRIPTION AND FEATURES

High tenacity polyester round sling, a synthetic fibre that gives excellent tensile strength and weather resistance with very low elongation.

It consists of a winding of high tenacity polyester yarns twisted together, externally covered with a high quality coloured sheath protection, heat-set to ensure the dimensional stability of the round sling and resist most mineral acids.

The sewings are managed by expert craftsmen to ensure maximum safety and reliability even after heavy and continuous use.

Each round rope is certified with CE marking and complies with the European standard UNI EN 1492/1-2.

USE

Industry and construction: suitable for lifting and handling bundles of pipes, drawn products, steel products and loads with delicate surfaces, where the round section of the sling guarantees the best performance by adapting perfectly to the load and avoiding any damage.

NOTES

Other lengths and capacities available on request.

The data in the table are indicative and subject to change without notice
