

EdilTracer

Braided and double braided ropes

DESCRIPTION AND FEATURES

Cotton braided rope, a biodegradable and sustainable fibre that makes it soft, easy to handle and gives it good resistance with moderate elongation.

The 16 spindle construction process allows an excellent knot hold and the presence of the inner core reduces the risk of crushing the braided rope.

USE

Construction: suitable as a replacement braided rope for line marking devices, used in the construction field to mark reference lines for the laying of tiles, the construction of walls or the installation of other architectural elements by impregnating the braided rope with special powders.

Decoration: suitable for the creation of gadgets, handicrafts and promotional items.

It is also used in the fashion and clothing industry for packagings tags.

NOTES

Other diameters and packagings available on request.
